

CSS(Casading Style Sheets)

PRESENTED BY,
SHRUTI DESHMUKH

Introduction to Style Sheets

- DHTML(Dynamic HTML) is evolved to fulfil needs of users
- Also to increase demand for eye catching websites
- IT combines HTML with CSS
- HTML specifies elements like list,tables,frames,etc
- CSS is used to determine elements like size'color'position'margin etcc

Advantages/Applications of stylesheet

- It is powerful mechanism for adding styles like color,font etc to web document
- With this image formatting and stylesheet text can be define in a single unit
- It has ability to make global changes to all documents from single location
- They are said to cascade en they combine to specify appearance of page

Introducton to CSS

- In CSS the <Style> and</style> tags are used
- This tags are written within <Head>and</Head>tags.
- Syntax:

```
<style type="text/css">
```

```
    { attribute:value;
```

```
      attribute:value;
```

```
    -----
```

```
    }
```

```
    ----
```

```
</style>
```

- 
- The expression `type="text/css"` indicates stylesheet conforms to CSS syntax
 - Attribute values are:
 - Font
 - Color
 - Background
 - Text
 - Text
 - Border
 - Margin
 - List
 - Display Line
